

KV-Split CPU Attention Deep Profile: P8K / O400

Llama-3.1-8B shape; OMP=120; taskset balanced across two sockets

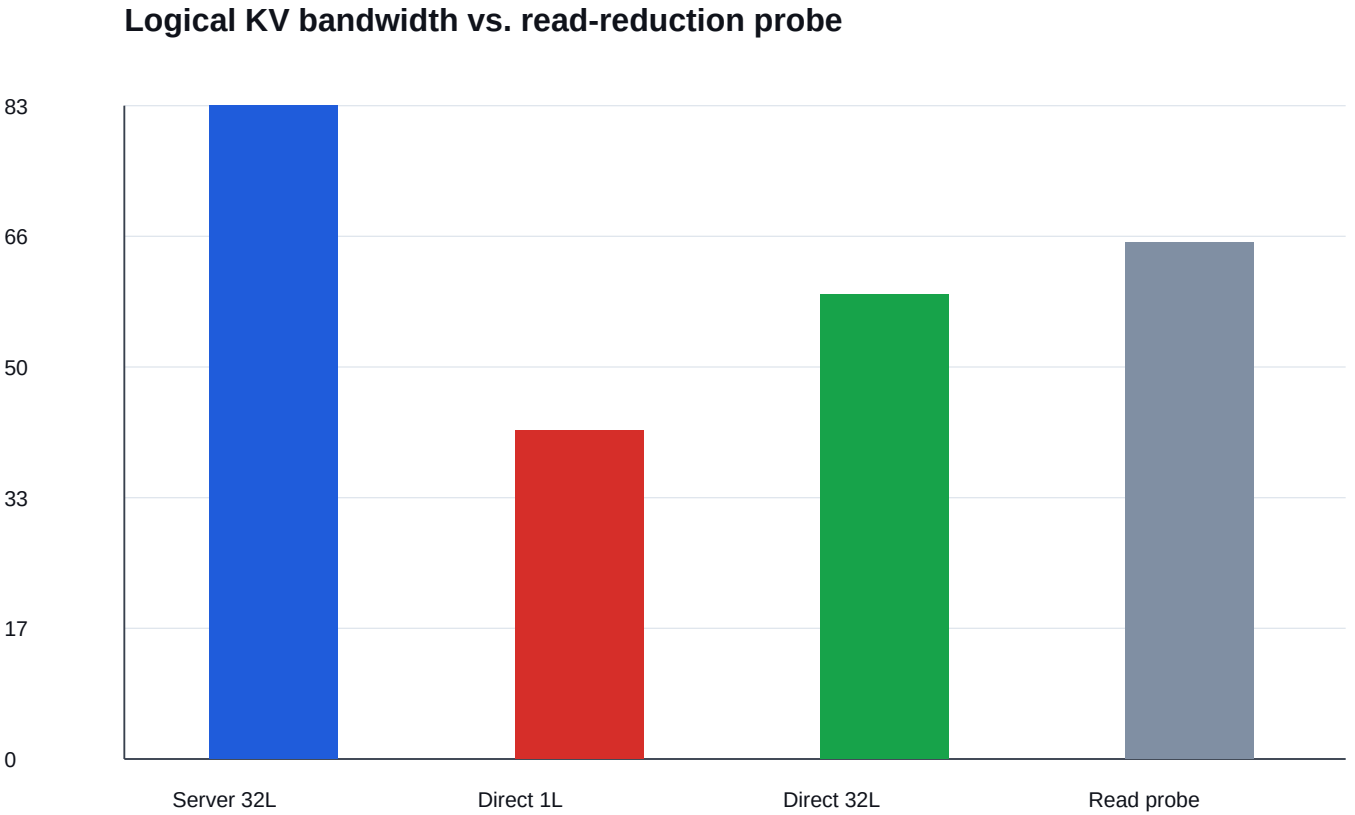

CPU attention internal thread-time

Measured CPU attention wall time

Logical KV bandwidth vs. read-reduction probe

Arch probe: random latency 41.9 ns/access; barrier 78.4 us; atomic 68.7 ns/op

Thread-time is accumulated over OpenMP workers; wall-time and logical bandwidth use measured CPU attention elapsed time.
