

Outer Gap Attribution: profile mode A/B

B memory aggregate: Layer 1 non-overlap breakdown

E fine memory: top fine timers (perturbed run)

Workload: prompt=8000, output=400, batch=1, OMP_NUM_THREADS=120

Key interpretation:

- JSONL -> memory aggregate outer gap delta: 2.970s.
- Profile-on JSONL request wall overhead vs profile-off: 3.885s.
- E fine outer-gap explicit fine timers sum: 27.309s.
- E fine mode is intentionally diagnostic and heavily perturbs runtime.
